EXECUTIVE SUMMARY

AWS Certified Cloud Practitioner with hands-on experience in AWS, Terraform, Ansible, Docker, and GitHub Actions. Built Infrastructure as Code, CI/CD automation, and containerized deployment solutions through real-world DevOps projects. Focused on Cloud Infrastructure, Infrastructure Automation, Kubernetes Fundamentals, and modern DevOps practices.

TECHNICAL SKILLS

Cloud: AWS (EC2, IAM, VPC, S3, Route 53, CloudWatch, RDS, Lambda, SNS)

Infrastructure as Code: Terraform (VPC, Subnets, Internet Gateway, Route Tables, Security Groups, EC2, Elastic IP, S3 Remote Backend)

Configuration Management: Ansible (Playbooks, Dynamic Inventory, Automated Provisioning)

Containers & Orchestration: Docker, Docker Compose, Docker Hub

Kubernetes: Kubernetes Fundamentals – Self-Learning (Pods, Deployments, Services, Ingress, ConfigMaps, Secrets, Namespaces)

CI/CD: GitHub Actions (Terraform Pipelines, Docker Build, Push, Deployment Automation)

Version Control: Git, GitHub | **Database:** MySQL | **Monitoring:** AWS CloudWatch

OS & Networking: Linux (Ubuntu, Fedora), Bash, SSH, TCP/IP, DNS, Nginx, Subnetting

SOFT SKILLS

Problem Solving | Continuous Learning | Technical Documentation | Attention to Detail | Time Management | Collaboration

PROFESSIONAL EXPERIENCE

End-to-End Infrastructure Automation Pipeline | DevOps Engineer (Personal Project) | 2026

Terraform · Ansible · GitHub Actions · AWS · Docker

<https://github.com/jaya-prakash-s-devops/Terraform-and-Ansible-infrastructure-automation-project>

- Architected a fully automated CI/CD pipeline where a Git push triggers GitHub Actions to execute Terraform init/validate/plan/apply, update Ansible dynamic inventory, run Ansible playbooks, and deploy via Docker Compose — eliminating all manual steps.
- Provisioned a complete AWS network stack via Terraform: VPC, Subnets, Internet Gateway, Route Tables, Security Groups, EC2, and Elastic IP — enabling reproducible infrastructure provisioning and teardown.
- Implemented Terraform Remote Backend with Amazon S3 for centralized state management; automated EC2 server configuration via Ansible covering Docker installation, repository cloning, environment injection, and Docker Compose startup.

Impact: Eliminated all manual deployment steps | Reduced configuration inconsistencies via IaC and Ansible automation | Enabled fully reproducible cloud infrastructure deployments

Container-Based Task Management Platform | DevOps & Backend Engineer (Personal Project) | 2026

Docker · GitHub Actions · AWS EC2 · Flask · MySQL · Nginx

<https://github.com/jaya-prakash-s-devops/devops-task-platform>

- Designed a 4-service Docker Compose architecture (Flask, MySQL, Nginx, frontend) with inter-service networking, volume-backed persistence, and clean service isolation.
- Built a GitHub Actions CI/CD pipeline that automatically builds, tags, and pushes Docker images to Docker Hub, then deploys to AWS EC2 via SSH on every code push — zero-touch continuous deployment.
- Configured Nginx as a reverse proxy to route external HTTP traffic to the Flask container, enforcing security boundaries and eliminating direct port exposure.

Impact: Zero-touch deployment from code commit to live EC2 | Improved application security via Nginx reverse proxy | Rollback-safe deployments via versioned Docker images

AWS re/Start Program | Cloud & DevOps Trainee | Jul 2025 – Sep 2025

Conducted by TNSkills in collaboration with Amazon Web Services & Cultus Education

- Completed hands-on training across 10+ AWS services including EC2, IAM, VPC, S3, Route 53, CloudWatch, RDS, Lambda, and SNS.
- Gained practical experience in Linux administration, cloud networking, security fundamentals, and deployment workflows through guided labs and project-based exercises.

Impact: Earned AWS Certified Cloud Practitioner (CLF-C02) | Developed job-ready cloud and DevOps skills applied directly across infrastructure automation projects

EDUCATION

Bachelor of Engineering – Electronics & Communication Engineering | University College of Engineering, Panruti | 2021 – 2025 |

CGPA: 7.4 / 10

AWARDS & ACCOMPLISHMENTS

- AWS Certified Cloud Practitioner (CLF-C02) — Amazon Web Services
- Terraform: Managing Infrastructure as Code — Packt
- 100 Days of DevOps Bootcamp — Udemy
- AWS re/Start Program Graduate — Amazon Web Services
